

What is a contact click / request?

Kirsty - 2019-08-07 - Performance Stats

The Contact Request row in your Performance stats represents the number of times that profile visitors clicked on the contact info on your profile to get your contact information. This typically means the visitor is serious about contacting you since he is requesting to see your personal contact information. There is no communication through Slixia.com itself. The visitors are able to view your information and are responsible for contacting you directly.
